

## Master Hotkey Trading Risk-Free with cPro

cPro's demo platform offers extensive, fully configurable hotkeys so you can practice rapid order entry and efficient trade management before going live. There are over 100 hotkey options available to customize within the platform settings, allowing you to experiment with specific keystrokes or key-combinations for simulated actions like buying, selling, or cancelling orders.

### Setting Up and Using Hotkeys in Demo Mode

The specific combination of keys (e.g., `Control + 1`, `Shift + 2`) depends on how you configure them. cPro is highly customizable, letting you develop a setup that fits your unique trading style.

- **Customization:** Experiment with a wide range of hotkey setups and assign specific functions to single keystrokes or combinations of keys
- **Functionality:** Practice using hotkeys designed for speed, allowing instant execution of simulated order entry actions such as buy or sell orders, or cancel-all commands with one keystroke
- **Precision:** Test configurations that pre-populate order entry fields for review before execution — perfect for building confidence
- **Ease of Linkage:** Assign colors to your hotkeys to link them to any trading or chart windows with the same color
- **Practice Makes Perfect:** Build muscle memory with your demo account so hotkey execution becomes second nature before you risk real capital
- **Avoid the Shift Key for Tickers:** When typing ticker symbols in the Montage/Level 2 window, avoid using the `Shift` key for capitalization, as this may inadvertently trigger your custom hotkeys. You can use the `Caps Lock` key instead.

For a detailed guide on setting up and a full list of available hotkeys, consult our help documentation or contact customer support.
